FOXXY Whitepaper

One fox. Four eras. · v0.1 draft · Nov 12, 2026

1. Overview

FOXXY is a wallet-based identity project on Ethereum. You connect your wallet, FOXXY reads your on-chain history, and your holdings, trading volume and conviction place you in one of four eras. Each era has its own fox, its own look and its own standing.

You don't pick your era. Your history does.

The score feeds a public leaderboard, and the leaderboard decides who gets into the FOXXY NFT mint. After the mint, the $FOXXY token (ERC-20) gives holders a say in what comes next: new eras, featured collections and how scoring works.

Website: https://www.foxxyeth.xyz/

2. The problem

- **Real collectors look the same as everyone else.** Someone who has held a few projects for years and someone who bought yesterday get the same treatment at mint time.
- **Mints reward speed and bots, not people.** FCFS whitelists and raffles are easy to farm with many wallets.
- **On-chain history is public but hard to read.** The signal is there, but nobody turns it into something you can see, compare and use.

FOXXY turns a wallet's history into a score and an identity, then uses that score to decide access.

3. The four eras

Era	Name	Who lands here
I	Ancient Warriors	Long-term NFT holders. Low trade frequency, strong conviction in a few projects.
II	Modern Operators	Active marketplace traders with high verified volume who move strategically.
III	Digital Minds	Wallets with wide collection diversity and active minting. Explore widely, hold selectively.

Era	Name	Who lands here
IV	Cyber Legends	Top-tier wallets with rare holdings and high volume. The most committed in the space.

4. Scoring engine

Points come from six categories:

Category	How it scores
Curated project holdings	NFTs from verified Ethereum projects. Floor piece 10 pts, top 10% rarity 25 pts, top 1% rarity 50 pts.
Trading volume	1 pt per 0.1 ETH of marketplace-verified volume. Wash trades excluded.
Holding duration	No points until a 14–30 day minimum hold, then full points.
Collection diversity	+5 pts per additional curated project, capped.
Mint activity	2 pts per verified mint, capped per project to stop farming.
Featured project boost	A rotating featured project gets a time-limited 1.5× multiplier.

The leaderboard is public. Anyone can paste an address to see its rank and what it would take to move up.

5. Anti-manipulation

- **Wallet verification:** Sign-In with Ethereum, so you can only claim wallets you actually control.
- **Wash-trade filtering:** sales flagged by Reservoir and OpenSea are excluded, along with buy/sell loops inside the same wallet cluster.
- **Sybil detection:** wallets that share funding sources or transaction patterns are clustered and capped.

6. NFT mint and spot allocation

The mint closes out the first season. Access is based on score and activity:

1. **Team core and reserve:** set aside for contributors and reserve.
2. **Guaranteed spots:** the top 500 wallets on the leaderboard at snapshot.
3. **FCFS whitelist:** remaining whitelist spots, first come, first served.
4. **Public mint:** whatever is left after the whitelist, open to everyone.

Early waitlist members earn pre-points before scoring goes fully live.

7. The $FOXXY token

Name	FOXXY
Ticker	$FOXXY
Standard	ERC-20
Chain	Ethereum mainnet (Base under consideration for lower fees)
Max supply	100,000,000, fixed. No minting beyond max supply, no burn rules.
Public sale price	$0.50
Fully diluted valuation	$50,000,000
Contract address	To be announced

Utility

- **Governance over future eras:** holders vote on featured collections, scoring weights and which blue-chip collections count toward the score.
- **Staking:** 5% of supply is set aside as staking rewards for early stakers, released over 24 months.

8. Tokenomics

Allocation	%	Tokens	Purpose
Community / score airdrop	35%	35,000,000	Biggest bucket. Rewards scorers and early participants.
Treasury / ecosystem	20%	20,000,000	Future eras, partnerships, grants, featured collections.

Allocation	%	Tokens	Purpose
Liquidity	15%	15,000,000	Locked in the pool at TGE.
Team	12%	12,000,000	Kept modest, long vesting.
Public sale / IDO	8%	8,000,000	Small and open to the community.
Advisors	5%	5,000,000	Strategic NFT and ecosystem advisors.
Staking rewards	5%	5,000,000	Emissions for early stakers.
Total	**100%**	**100,000,000**	

9. Vesting and unlocks

Allocation	Unlocked at TGE	Cliff	Vesting after cliff
Community airdrop	40% (14M)	None	Rest linear over 6 months
Liquidity	100% (15M), locked in pool	None	None
Public sale	50% (4M)	None	Rest linear over 3 months
Treasury	10% (2M) for operations	None	Rest linear over 36 months, multi-sig
Staking rewards	0%	None	Released over 24 months based on participation
Advisors	0%	3 months	Linear over 18 months
Team	0%	6 months	Linear over 24 months (about 30 months total)

Circulating supply over time

Point	Circulating	% of supply
TGE	35,000,000	35.0%
TGE + 1 month	40,540,000	40.5%
TGE + 2 months	46,080,000	46.1%

Point	Circulating	% of supply
TGE + 3 months	51,630,000	51.6%
TGE + 6 months	65,080,000	65.1%

Initial market cap at TGE: 35M × $0.50 = **$17,500,000**.

10. Roadmap

Phase 1: Game launch (November 2026)

- Game and scoring go live
- Players climb the leaderboard

Phase 2: Game conclusion and mint (late November to early December 2026)

- The mint marks the end of the first season
- Open to players based on in-game activity and score

Phase 3: TGE (end of December 2026)

- Token generation event
- Public sale
- CEX listing at TGE

Phase 4: Post-TGE (Q1 2027)

- Game updates and new seasons
- New eras and more utility

11. Disclaimer

This document describes a project in development. Numbers, dates and features may change before launch. Nothing here is financial advice or an offer to sell securities. Do your own research and check local rules before taking part in any token sale.
